

/ CAMPUS LIFE IN PARIS

The École normale supérieure offers its students the opportunity to live and study in the very heart of Paris. Its historical building is indeed to be found in the Quartier latin (Latin Quarter). This ancient building is well-known for its courtyard, called the Cour aux Ernest and adorned with busts of French thinkers, researchers and scientists who left their mark on history.

The two other campuses of the ENS are Jourdan campus (near the Parc Montsouris) and Montrouge campus (in a town next to Paris). With their modern and convenient installations, they also offer students comfortable places of living and study, close to the centre of the capital.

PARIS

 | PSL 

The **École normale supérieure (ENS)** and **Lycée Louis-le-Grand (LLG)** have set up a partnership for the recruitment of laureates of the International Mathematical Olympiads.

The École normale supérieure (ENS) is currently recruiting one to two gold medalist winners of the International Mathematical Olympiads for an integrated ENS-Louis-le-Grand (LLG) five years program.

These students will start their higher education with the status of ENS-LLG scholars during their first two foundation years (freshman and sophomore years).

No prerequisite in french is required.

They will follow an intensive special program at LLG (Lycée Louis-le-Grand, Paris, France) with an emphasis on mathematics and, if needed, intensive French courses. Moreover, they will receive a mentor from the Mathematics department of ENS.

As long as the students reach the level of excellence expected at LLG, after two years they will become ENS students (normaliens). The ENS-LLG laureates will obtain a 1000 € scholarship per month during five years.

For accommodation, ENS will offer lodging at a good market price in Paris or in the Parisian suburbs.

/ HOW TO APPLY TO THE ENS-LLG OLYMPIAD PROGRAM ?

One to two candidates will be selected amongst the Gold Medal Laureates of the Mathematics Olympiads starting in the summer of 2019.

The selection will take place after an interview with the LLG-ENS pedagogical team, composed of the ENS's mathematics and physics managers, designated by the ENS director, and the pedagogical manager, designated by the LLG director.

- Opening of the pre-applications : February 28th, 2019
- Closure of the pre-applications : June 30th, 2019

/ DEPARTMENT OF MATHEMATICS AT ENS

The Department of Mathematics at École normale supérieure is both a teaching department and a CNRS research laboratory.

10
Fields Medals

13
Nobel Prize

The École normale supérieure is the best institution of higher education in both math and physics in France.

The École normale supérieure dominates the world ranking of Nobel Prize winners.

/ LYCÉE LOUIS-LE-GRAND

Louis-le-Grand is a public secondary school comprising two distinct sections : a traditional Lycée (800 pupils) and Classes Préparatoires (900 students). The latter prepare candidates over the course of two years for entry to the country's top centers of higher education.

5
Fields Medals

The LLG high school is the best institution for preparatory class for the École normale supérieure.

The Program is funded by the Fondation de l'ENS, from gifts made by ENS Alumni.
